DETAILED ACTION

Claim Objections

A series of singular dependent claims is permissible in which a dependent claim refers to a preceding claim which, in turn, refers to another preceding claim.

A claim which depends from a dependent claim should not be separated by any claim which does not also depend from said dependent claim. It should be kept in mind that a dependent claim may refer to any preceding independent claim. In general, applicant's sequence will not be changed. See MPEP § 608.01(n).

Claim 2 is objected to because of the following informalities: Claim 2 recites, "said display is to utilize a windshield for viewing..." It is not clear as to how the display utilizes the windshield. For purpose of examination, the examiner will interpret the claim as to mean that the display provides a reverse image, which projects the reverse image toward the windshield surface and then being reflected as a normal image toward the viewer. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

AII UIIII. 20/1

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ko et al. (JP 2000-142170) in view of Kuwayama et al. (US 5905477).

With respect to claim 1: Ko et al. disclose in Figure 1 an automotive information display apparatus comprising: a transmissive LCD screen with LED backlighting (element 3) mounted on a dashboard (element 7) in the vicinity of a glass surface (element 1).

Ko et al. fail to specifically disclose a mounting device for mounting the display system.

However, Kuwayama et al. disclose in Figure 3 a mounting device for mounting a headup display system on the dashboard (Column 3, lines 7-24).

Therefore, it would have been one of ordinary skill in the art at the time the invention was made to construct an automotive information display apparatus as taught by Ko et al. wherein the mounting device used for mounting the display system is such as taught by Kuwayama et al., since Kuwayama et al. teach that the disclosed mounting device allows the display system to be detachable so as to prevent theft and adjustable so as to provide excellent viewing angles (Column 5, lines 32-51).

As to claim 2: Ko et al. further disclose in Paragraphs 0017 and 0028 that the display provides a reverse image in which the image is projected toward the windshield, then a normal image is formed by being reflected off of the windshield toward the viewer.

As to claim 3: Ko et al. further disclose in Paragraph 0016 that an input translator (signal processing machine) hard-wired to the display system interfaces with the vehicle to detect the data to be displayed on the LCD and translating the data into a digital signal to operate the LCD panel display.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wen-Ying P. Chen whose telephone number is (571)272-8444. The examiner can normally be reached on 8:00-5:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on (571)272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
